<b>NGSS: MS-ETS1:</b> Engineering design-how do engineers solve problems?		
<b>NGSS: MS-ETS1.A: Defining and delimiting an engineering problem</b> What is a design for? What are the criteria and constraints of a successful solution? [The more precisely and design task's criteria and constraints can be defined, the more likely it is that the designed solution will be successful. Specification of constraints includes consideration of scientific principles and other relevant knowledge that are likely to limit possible solutions (e.g., familiarity with the local climate may rule out certain plants for the school garden).]

Dragonflies: Flying Aces)</li> </ul>
<b>NGSS: MS-ETS1.B: Developing possible solutions</b> What is the process for developing potential design solutions? [A solution needs to be tested, and then modified on the basis of the rest results, in order to improve it. There are systematic processes for evaluating solutions with respect to how well they meet the criteria and constraints of a problem.]

<p><b>NGSS: MS-ETS1.C: Optimizing the design solution</b></p> <p>How can the various proposed design solutions be compared and improved? [There are systematic processes for evaluating solutions with respect to how well they meet the criteria and constraints of a problem. Comparing different designs could involve running them through the same kinds of tests and systematically recording the results to determine which design performs best. Although one design may not perform the best across all tests, identifying the characteristics of the design that performed the best in each test can provide useful information for the redesign process-that is, some of those characteristics may be incorporated into the new design. This iterative process of testing the most promising solutions and modifying what is proposed on the basis of the test results leads to greater refinement and ultimately to an optimal solution. Once such a suitable solution is determined, it is important to describe that solution, explain how it was developed, and describe the feature that make it successful.</p>
